

Off-site CHCS access via Persona server

Setup for 1st time (must be an administrator)

If they have a CHCS account and a 128 bit ssl capable web browser:

<https://Nmcsd-tn.med.navy.mil/persona>

This will start a session on our Persona server, which will create a terminal emulation session to CHCS. Use the 32bit client. It performs better than the java client.

See persona setup wizard

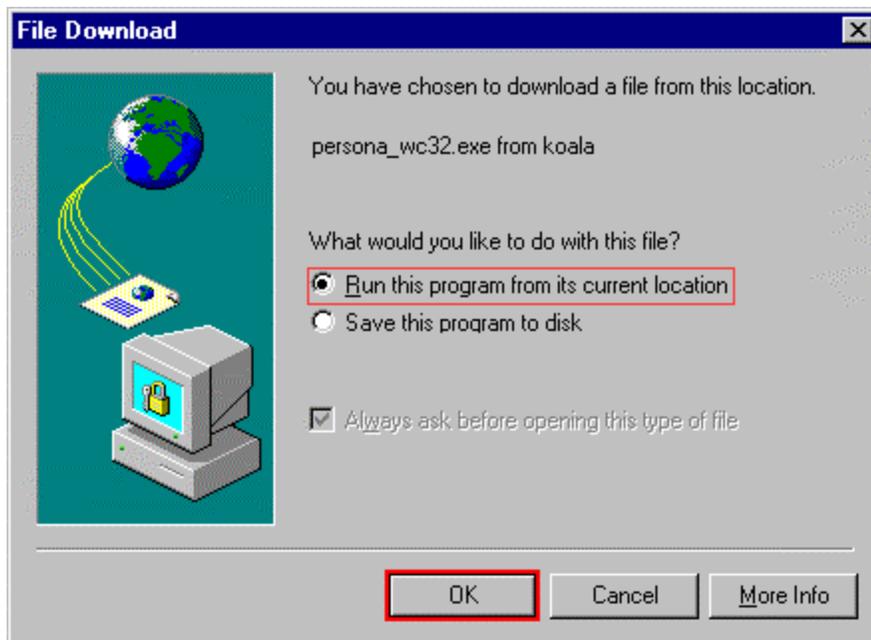

Next

Windows 32-bit thin client

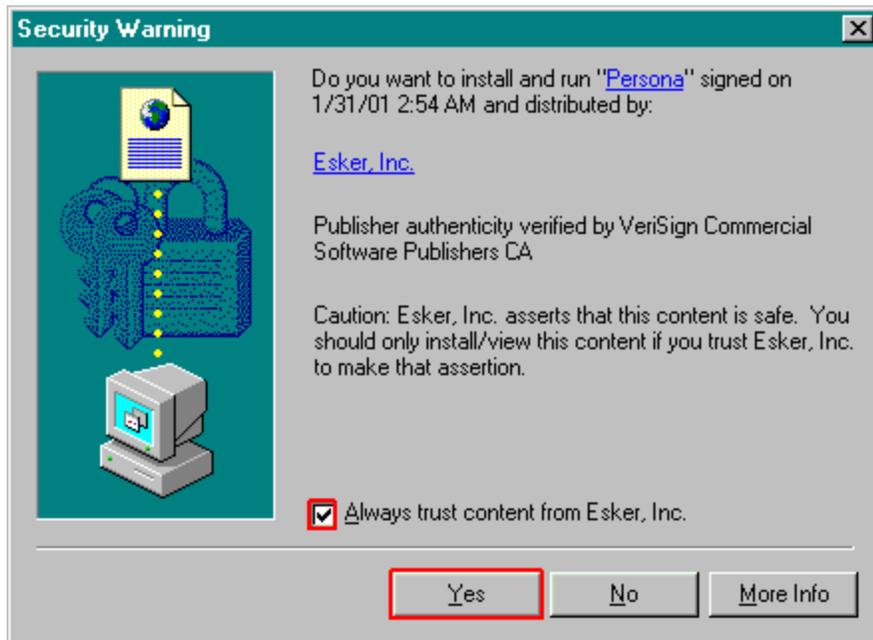

For Windows 2000 and XP users: you must have Administrator rights to install this client.

Print these instructions to refer to while installing the Persona Client.

1. When you click the download link (at the bottom of this page), you should get a window similar to this one.

Select "Run this program from its current location" and click OK. You may get a warning dialog similar to the one below:

Click Yes and check Always trust software from Esker. The Client Setup program will download and run automatically. Note: This may take several minutes to download and run depending on your connection speed.

2. Setup prompts for an installation folder. Unless you know of some problem, accept the default folder. If this is an update Setup uses the previous installation location as the default. Click Next.
3. Setup then says that it is ready to copy its files to your computer. Click Next to begin copying files.
4. When Setup is done copying files, it displays a dialog indicating that it is finished. Click Finish.
